

Phil Moody 2012 Study Travel Award

About the Award

ASPAC offer an annual Study Travel award of up to \$1500 to attend conferences or meetings that aim to advance the understanding and application of soil and plant analysis to benefit plant nutrition, sustainability or the environment. Each year ASPAC dedicates the Study Travel Award to a long-standing contributor of the organisation. For 2012, ASPAC has the pleasure of naming the award after Dr Phil Moody.

Dr Philip Moody is Principal Soil Scientist with Environment and Resource Sciences, Queensland Department of Environment and Resource Management, and leads the Soil Processes research group. Phil has had a long association with ASPAC, both as a state representative and also sponsoring the participation of several south-east Asian laboratories in the ASPAC proficiency program through funding provided by ACIAR. Phil has made significant contributions to soil testing in Australia through the development of the single point P buffer index (PBI), demonstrating the effect of PBI on interpretation of the Colwell soil P test and recently developing a P environmental risk index based on PBI and Colwell-P. He was senior author of the 'Phosphorus' chapter in the ASPAC book: 'Soil Analysis: an Interpretation Manual'. He is enthusiastically committed to promoting quality-assured soil analysis as a key tool for achieving both productivity and environmental outcomes.

Applications should be made on the template which can be downloaded from the ASPAC website (www.aspac-australia.com) and submitted electronically

to the Chairperson Teresa Fowles
